Directory Data Access Personnel Contact Information

Directory Data Access Personnel (DDAP) are individual(s) with AHRI Directory system login capabilities which enable them to manage data (i.e. adding/editing records) in the system.

Only OEM companies manage Directory data, and therefore login access is not provided to PBM companies. If this application is for a PBM company, please provide contact information for the OEM personnel who will be managing the PBM Company's data.

Each company must have at least one DDAP per certification program. The available system permission levels for DDAPS are:

Data Master – An individual with this permission has the ability to add brand names and manufacturer names, add/edit records, and view/download Company data (beyond published data fields).

Data Entry – An individual with this permission has the ability to add/edit records and view/download Company data (beyond published data fields).

Data View – An individual with this permission has the ability to view/download Company data (beyond published data fields).

If there will only be one DDAP, this individual will be assigned the Data Master role. Upon receipt of a complete application, AHRI will contact each DDAP with their individual system login credentials.
