

AHRI Certification for GCC

CERTIFY YOUR HAT T3 PRODUCTS WITH AHRI

The Air-Conditioning, Heating, and Refrigeration Institute (AHRI) certification program is globally recognized and industry respected. Certification programs for split, ducted splits, packaged units, and variable refrigerant flow products are becoming GCC-compliant as they are revised to test at regional high ambient rating conditions (T3). The performance of equipment in the AHRI Certified program is independently measured and verified, instilling consumer confidence and enabling fair product comparisons. Yearly selection of certified products for rigorous testing by independent AHRI-accredited laboratories go far beyond the requirements for products that are simply tested or rated to AHRI standards.

TRUST CREDIBILITY RELIABILITY COMPLIANCE

- ✓ Differentiate your product
- ✓ Simple process for ULE, USE, and VRF certification program participants
- ✓ Residential, commercial, and industrial products are covered
- ✓ Performance claims are independently measured and verified by a third-party laboratory (includes T3)
- ✓ Meets government and customers' requirements and specs

Globally Recognized. Industry Respected.

A Simple Guide for AHRI Program Participants:

1. Identify the GCC region-specific models you wish to certify.
2. Coordinate with AHRI MENA staff and your designated certification program engineers.
3. Upload models to the AHRI Directory (ahridirectory.org) through your head office.
4. Share your AHRI Certificate of Product Ratings with customers, regulators, and consultants.
5. AHRI's discretionary testing of newly-loaded models will be performed during annual verification testing.

Don't delay...get your GCC-bound products AHRI Certified today!
